

HIGH PRODUCTIVITY

VARIOUS SORTING OPTIONS

VERSATILE - CAN HANDLE ALMOST EVERY APPLICATION

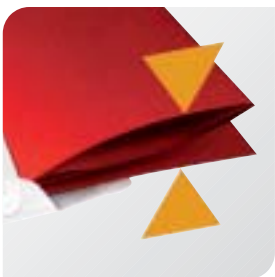

ALMOST ANY TYPE OF ENVELOPE - FROM SMALL TO LARGE

MODULAR - IT CAN GROW WITH YOUR BUSINESS

INCREASE BOTTOM LINE WITH PRINTMACHINE SOLUTIONS

Increase the bottom line of your business and automate the entire document creation process with Neopost's PrintMachine software solutions. The PrintMachine software ensures the delivery of customer communication faster, more cost-effectively and more securely. It will shorten document creation cycles and increase profitability for your business. The PrintMachine software is a perfect complement to your SI-92 folder inserter.

DOUBLE SECURITY

To ensure that every recipient gets the correct mail piece, Neopost's electro-mechanical thickness detection protects against double feeding. It disregards paper dust, printer toner or colored paper. The SI-92 measures the thickness of every document from each feeder (secure'n Feed) and the thickness of the complete set (secure'n Sert) right before inserting.

OPTICAL MARK RECOGNITION (OMR)

Using printed marks, the SI-92 is able to securely process sets of documents with a varying number of pages to ensure they reach the correct recipient. This will save a lot of time and money, as a tedious manual task is eliminated securely.

SI-92

UNMATCHED VERSATILITY AND PRODUCTIVITY

High productivity and exceptional versatility is what distinguishes the SI-92 from all other folder inserters. Whether it is the high inserting speed, the capability to feed inserts like CDs or booklets, the possibility to use #10 envelopes and flats in the same run, or the various sorting options, the SI-92 consistently and effortlessly delivers fast performance with dead-on precision.

FLEXIBILITY IN APPLICATIONS

Thanks to Neopost's unique flexFeed technology, you can load almost any document size in each of the feeders. The variety in applications is up to you. Furthermore, you don't need to fan documents before loading.

GROWING WITH YOUR NEEDS

The SI-92 can be expanded from 1 to 6 stations at any time, providing additional capacity, flexibility and productivity, and protecting your investment.

AUTOMATIC FOLD SETTING

With the SI-92's fully automatic folder you can fold up to 8 pages in c-fold, z-fold or half-fold, crisply and silently.

VERSAFEEDER

In order to make even more applications possible, there is the versaFeeder. This specialized feeder can process thicker and stiffer inserts such as booklets and brochures up to 11" size or even CD's. Moreover, the versaFeeder can be loaded from the top, ensuring continuous running. For maximum speed, put 2 versaFeeders in your SI-92 and experience real productivity.

CONTINUOUS OPERATION

Document and envelope feeders can be refilled without stopping production, maximizing practical speed and productivity.

USER-FRIENDLY

The large central control panel features a graphical interface with icons and easy-to-read menus in multiple languages. Save time and eliminate redundant efforts by pre-programming up to 10 frequent jobs. Real-time help messages appear on a pictorial display.

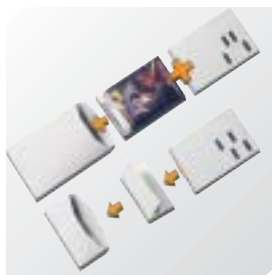

MAXIMIZED OUTPUT CAPACITY AND SORTING EFFICIENCY

With the optional dual conveyor and sorting system, when one conveyor is full, the SI-92 switches to the other, leaving you time to empty the first one. The SI-92 can also automatically sort mail into 2 exits based on envelope size, weight, OMR mark, or a combination of these.

MAXIMUM PRODUCTIVITY - CASCADING ENVELOPE FEEDERS

Optional twin feeders mean that the SI-92 never has to run out of envelopes. When one feeder runs empty, the other starts feeding, while you refill the first. Total capacity is over 800 envelopes.

EXCELLENT ACCESSIBILITY

The SI-92 gives you quick, safe and easy access to all parts of the paper path. You will quickly be up and running again if there is a break in production.

ELIMINATE PRE-SORTING - JUST MIX'N GO

Based on pre-defined criteria, mix'n Go selects the right size of envelope for the right mailset. This means #10s and flats can be processed in one run without pre-sorting or stopping.

DIVERT'N CONTINUE

To increase productivity, the intelliDeck diverts duplicate or faulty documents before folding them while the system continues processing your outgoing mail.
